

Credit Card Approval Prediction

Technologies Used

Python

Anaconda Navigator – <https://www.anaconda.com/download>

PyCharm – <https://www.jetbrains.com/pycharm/>

NumPy – <https://numpy.org/doc/stable/>

Pandas – <https://pandas.pydata.org/docs/>

Scikit-learn – <https://scikit-learn.org/stable/>

Matplotlib – <https://matplotlib.org/stable/>

Seaborn – <https://seaborn.pydata.org/>

Flask – <https://flask.palletsprojects.com/>

Description

This project predicts whether a credit card application will be approved using machine learning techniques. It involves data preprocessing, feature engineering, model training, and evaluation. The final model is deployed using Flask for real-time prediction.
